Documentation...

A word cloud of various documentation formats arranged in a circular pattern. The words are: OpenDoc (dark green, top right), XML (yellow, top right), Office (dark red, top center), Textile (orange, top center), Wiki (orange, left), Markdown (yellow, left), LaTeX (dark green, bottom center), DocBook (yellow, bottom center), and YAML (dark red, bottom right).

OpenDoc

XML

Office

Textile

Wiki

Markdown

LaTeX

DocBook

YAML

AsciiDoc

```
= AsciiDoc is Writing Zen
Doc Writer <doc.writer@example.com>
:icons: font

_Zen_ in the *art* of writing `plain text` with
http://asciidoc.org[AsciiDoc].

[TIP]
Use http://asciidoctor.org[Asciidoctor] for the best AsciiDoc
experience.footnote:[Not to mention the best looking output!]
Then icon:twitter[role=aqua] about it!

== Sample Section

[square]
* item 1
* item 2

[source,ruby]
----
puts "Hello, World!"
----
```

AsciiDoc source

AsciiDoc is Writing Zen

Doc Writer – doc.writer@example.com

Zen in the art of writing **plain text** with [AsciiDoc](http://asciidoc.org).

Use [Asciidoctor](http://asciidoctor.org) for the best AsciiDoc experience.^[1] Then  about it!

Sample Section

- item 1
- item 2

```
puts "Hello, World!"
```

¹. Not to mention the best looking output!

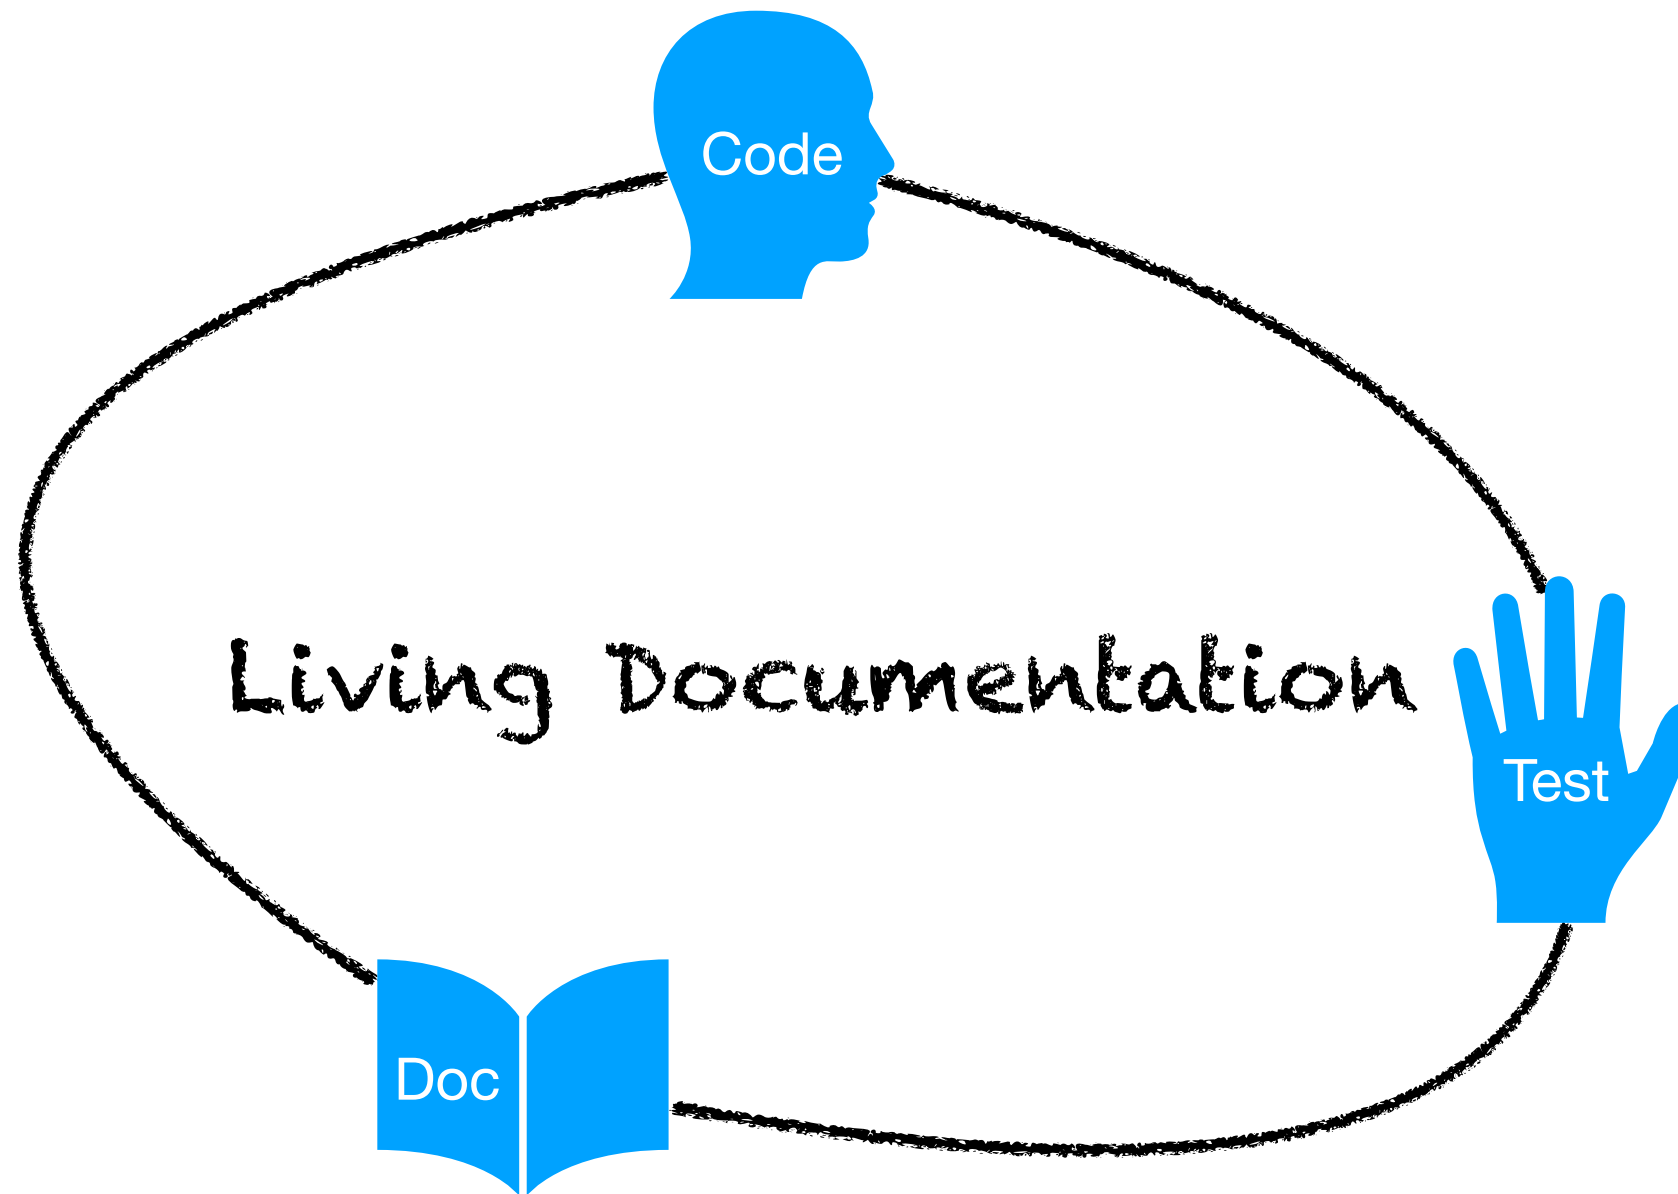

Rendered HTML.

Use AsciiDoc for document markup.
It's actually *readable* by humans,
easier to parse and *more flexible* than XML.
L. Torvalds

AsciiDoctor

- modern Implementation of **AsciiDoc** in **Ruby**
- thanks to **JRuby** easy usable on the **JVM**
- *extensible*
- *many output formats*
 - PDF, eBook
 - HTML
 - ‚everything else‘ -> DocBook

Demo

Get started

AsciiDoctor Gradle Lazybones Template

```
lazybones create asciidoctor-gradle <yourProjectName>
```

```
sdk install lazybones
```

<http://sdkman.io/>

Happy life with documentation
